

Handling and Storage Instructions

(English)

Handling and storage instructions

- The products should be stored in the dry, dust-free environment to avoid their damage
- The products should be protected against the damaging effects like mechanical damage, climate or chemical influences.
- When delivering from the warehouse the long-standing goods should be withdrawn at first (system FIFO).
- Stored products must be properly and visibly marked to avoid any confusion.
- Products should be stored undercover in a dry, unheated environment and be loosely stacked off the ground to ensure adequate ventilation. It is important that products that have different finishes are kept apart.
- Any components packaged in degradable bags, boxes, cartons etc. should always be stored in a well-ventilated and dry location.
- All products should be stored away from areas where processes or activities could cause damage and/or contamination.
- Due consideration should be given to ensure products are stacked together by type and width and in such a way as to prevent toppling.

Loading and offloading recommendations

- Site deliveries should preferably only be made where suitable mechanical handling equipment is available on site.
- The delivered material must be treated with care. Lifting must only be carried out from the sides and the forklift truck tines must pass below a complete bundle.
- Tines must never be inserted into the end of the bundle, unless provision is made such as special packaging and/or extended tines, otherwise the safety limits of the lifting vehicle may be exceeded and damage may be caused to the equipment being lifted.
